

Elastomeric Coatings

Beautiful and long lasting, Merlin's can coat the surface your building with a thick, rich and resilient material in any color you can imagine and guaranteed to last a minimum of ten years

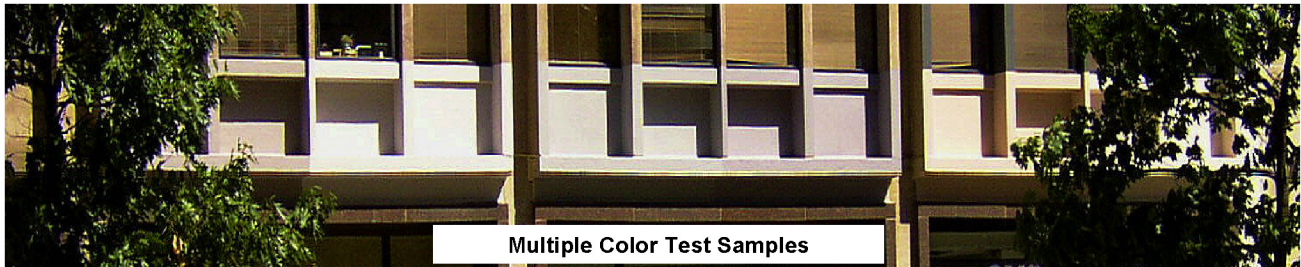

A BUILDING'S FACADE CANNOT ALWAYS BE RESTORED TO ITS ORIGINAL APPEARANCE

When inexperienced persons clean a building facade, the building exterior can be **permanently destroyed**.

The use of excessively high pressure and strong, unbuffered acids damaged the exposed aggregate exterior of this building beyond the point where it could be restored to its original condition.

FORTUNATELY - THERE IS AN ANSWER!

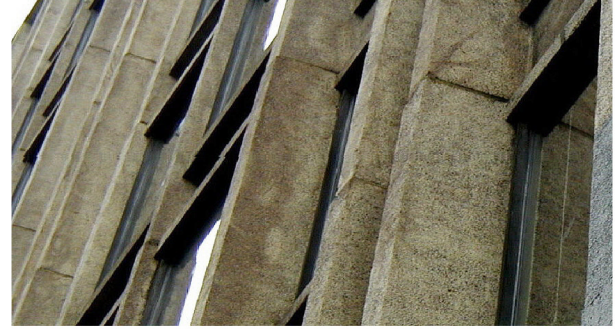

Elastomeric Coatings are waterproof, last for many years and are available in any color that you could possibly desire. In this picture, multiple color samples have been applied to the building to allow the ownership/management to choose the right color or colors for their entire building exterior.

The next page shows the dramatic difference an elastomeric coating could make on your building

MERLIN'S
RESTORATIONS, INC.

301- 518 - 4689

*The Blake Building
Washington, DC*

The picture above clearly shows the severe damage done to this building's facade by an inexperienced pressure washing company.

After the application of a Tnemec elastomeric coating, the new color enhanced this building's natural beauty while complementing the color scheme of its surroundings. The Blake Building has been restored to its rightful place as a landmark building at the corner of **Connecticut Avenue** and **"L" Streets, NW**. (see middle building above)
